## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5, drawn to a method for generating phosphorothioate oligo mixtures, classified in classes 536 and 435, subclasses various.
  - II. Claims 6 and 7, drawn to a method for increasing the natural mutation rate of organisms, classified in classes 435 and 514, subclasses various.
  - III. Claims 8-13, drawn to a method for stabilizing RNA in vivo and/or in vitro, classified in classes 435, 536 and 514, subclasses various.

The inventions are distinct, each from the other because of the following reasons:

Inventions I- II are unrelated to one another. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

Group I is drawn to a method for generating phosphorothioate oligo mixtures, which is unrelated to the method for increasing the natural mutation rate of organisms of Group II.

Group I is drawn to a method for generating phosphorothioate oligo mixtures, which is unrelated to the method for stabilizing RNA in vivo and/or in vitro of Group III.

Group II is drawn to a method for increasing the natural mutation rate of organisms, which is unrelated to the method for stabilizing RNA in vivo and/or in vitro of Group III.

Art Unit: 1623

Although the inventions are classified in the same class and sub-class, searching the three groups of inventions constitutes a burdensome search, as a thorough search comprises a search of foreign patents and non-patent literature as well as the appropriate U.S. patent classifications.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and /or divergent subject material, restriction for examination purposes as indicated is proper.

It is noted that the four independent and distinct inventions would indeed impose an undue burden upon the examiner in charge of this application.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
